HOW IT WORKS

- Department raises a job requisition; once approved it is published to the careers website / job boards.
- Applications land as candidate cards in the Recruitment pipeline against that position.
- Recruiter and interviewers move each candidate through the stages, logging interview evaluations and scorecards.
- An offer / contract proposal is prepared and sent for the candidate's signature.
- On signature, the candidate is marked **Hired** — we can create Employee record, carrying over CV, skills and contact details.

3. Department Check

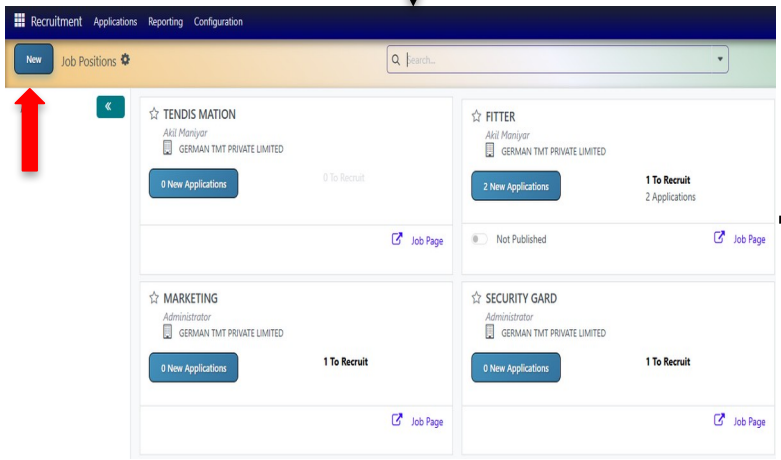

Check Department

Leave

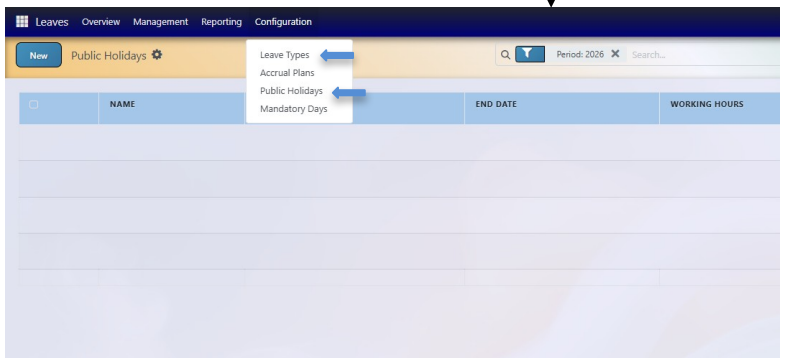

Allocate Leaves

Leave Types

Public Holidays

Allocate Leaves

Allocate Leaves (All Employees) is used when the company wants to grant a specific leave balance to multiple employees at once. Instead of creating a separate allocation for each employee, HR can select the company, choose the required leave type (such as Casual Leave or Sick Leave), specify the number of days/hours and validity period, and create the allocation. The system will then automatically allocate the selected leave balance to all eligible employees of that company.

Leave Types

Leave Types allow the company to define and configure different types of leaves such as Casual Leave (CL), Sick Leave (SL), Earned Leave (EL), Paid Time Off, Management Leave, and On Duty. Each leave type can have its own approval and allocation rules.

Public Holidays

Public Holidays allow the company to define holidays that apply to employees, such as national holidays, festivals, or company-declared holidays. The holiday can be configured with a start date, end date, working hours, and company so that it is considered when calculating employee working and leave schedules.

7. Attendance

Check-In
Start work

Check-Out
End work

Attendance
Record punches in overview

Attendance Report
Here we can generate an attendance report for a particular employee by selecting the required month. The report shows the employee's attendance details for the selected month

Dily Attendance Summary
Here we can view the daily attendance details of employees, including who is present, absent, on leave, or has incomplete attendance.

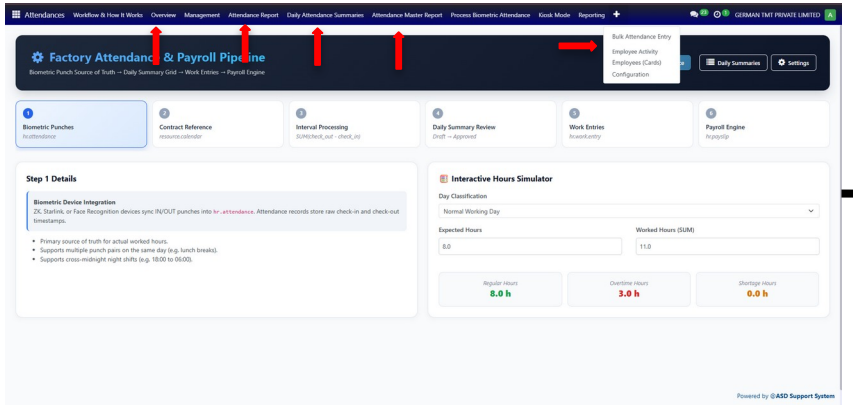

Attendance Master Report
Here we can generate the attendance report for all employees at once. The report provides a complete overview of employee attendance

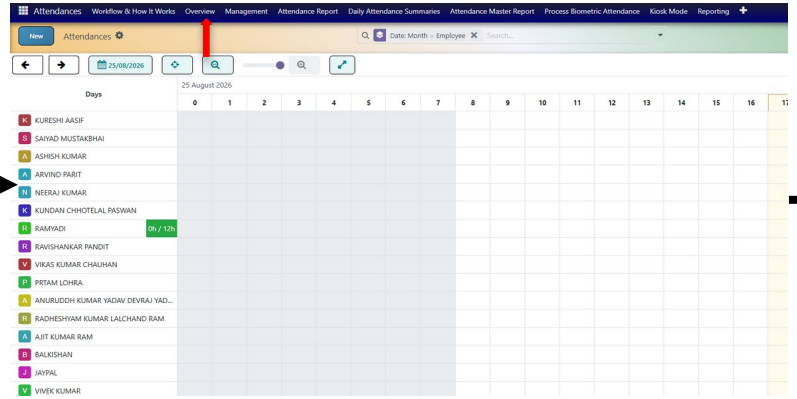

Bulk Attendance Entry
Here we can enter attendance for multiple employees at once instead of updating each employee individually. HR can select the required date and enter the attendance details for all selected employees in a single operation.

Set the structure

Contract
Employe visible which are in contract only get payslips

Payslip
Here we can generate a payslip for a particular employee by selecting the employee and required payroll period. The payslip shows the employee's salary details, earnings, deductions, and net salary.

Payslip Batch
Here we can generate payslips for multiple employees at once. Instead of creating each payslip individually, HR can select a group of employees or the required batch and generate all their payslips together.
